

**If you don't get vaccinated against
the coronavirus, you put yourself and
others at risk.**

The unvaccinated have a significantly higher risk of contracting severe COVID-19.
This can lead to capacity overloads in hospitals.

**What does it matter to others whether
I get vaccinated or not? It is my risk.**

**The most important goal of vaccination is
to prevent severe courses of
disease and deaths.**

Even if vaccinated people become infected, they are much better protected from a severe course of disease than unvaccinated people.

**The vaccination does not protect me
from infection.**

Only safe and effective vaccines are approved.

Approval studies were conducted simultaneously and in compliance with high safety standards – as with other vaccines.

The COVID-19 vaccines have been developed so quickly, they cannot be safe.

A strong immune system does not guarantee a mild course of the COVID-19 disease.

No immune system is prepared for the coronavirus.
Even the young and healthy can become severely ill.

**My immune system is strong enough.
I don't need to get vaccinated.**
